

Editorial

The following special section on Global Climate Change is a unique format for *Environmental Toxicology and Chemistry (ET&C)*. Historically *ET&C* has published manuscripts in seven formats: peer-reviewed Editorials, Letters to the Editor, Short Communications, Critical Reviews, Reviews, Research Papers, and Focus articles. This series of seven papers represents the consensus findings of 36 invited scientists from 11 countries on

a very important, challenging, and timely topic. These papers were subjected to the usual anonymous peer review process involving at least two external reviewers for each paper and an Editor, and are being published as Science and Environmental Policy Reviews. We hope you find these papers useful and look forward to publishing similar special sections of this type in the future.
